Who says you can't have getaway and gas saving too? (maybe you'd better try Variable Pitch Dynaflow!!)

As any automotive engineer will tell you, the goal in automatic transmissions. has long been a design that would give top acceleration and top gas mileage-and still be absolutely smooth.

Well, it's easy to step up acceleration, or gas mileage but tough to do both together unless a lot of gearshifting takes place, which cuts down on smoothness.

So Buick engineers looked to aviation for the answer-and brother! what a wondrous new magic they came up with!

They took a leaf from today's plane propeller - which switches the pitch of its blades one way for quick take off - and another way for better gas mileage aloft.

They brought the same principle to Dynaflow Drive*-to the twenty propeller-like blades in the Dynaflow "stator." They engineered these blades to swivel like the blades of the plane propeller—and with the same results.

In cruising and all normal driving, the blades are angled for economy and you get a lot more miles from a tankful of gas.

But when you have to move instantlywhen you need quick getaway, or a sudden burst of safety-surge power to get out of a tight spot - you just press down that gas pedal, and you're off in a split second,

You've never felt anything like it before -because there's never been anything like it before in an automobile. ...

It's action that's sheer thrill-action that's backed by the highest V8 horsepowers in Buick history-action that's sending Buick sales soaring to record-high levels.

Come in and try it, at the wheel of a Buick Special, Century, Super or ROADMASTER. You have nothing to loseand the year's most thrilling buy to meet.
